

# South Buckinghamshire NHS Trust.

Acute and Community Hospitals PFI project,  
Wycombe and Amersham.

The hospital project forms part of larger project to rationalise 4 hospitals onto 2 sites involving the design and construction of an Acute hospital with Private patients wings in Wycombe and an Community hospital in Amersham.

The design of both hospitals is carefully organised to provide natural ventilation where HBN documentation allows and is arranged around a series of courtyards to assist in orientation and to create a non institutional environment.

Accommodation at Wycombe, which is illustrated, includes Surgical and Medical wards, Surgical investigation and Urology unit, Operating theatres, Renal unit, Paediatric ward, Post graduate education centre and Elderly day facilities.

Client: Taylor Woodrow Construction for Bromley hospitals NHS Trust  
Project value: £30m total
