

Bristol Oncology Centre.

The design of an Oncology Clinical Trials Unit and a Professorial research laboratory for the University of Bristol's Professor of Oncology.

This project involved both a new build laboratory of highly specific function and based on a 3.3m modular laboratory layout and the refurbishment of an administration area for a new Clinical Trials Unit (CTU) that organises and supports clinical research studies for clinicians involved in cancer care and where research is carried out into the causes of cancer and into improving the effectiveness of treatment.

Flexibility in the design of the CTU was essential.

Client: Special Trustees of UBHT and University of Bristol
Project value: £3.5m total

Bristol Oncology Centre.
